

# DiscovaCam Handheld

*Protecting your privacy*

*at home*    *at work*    *on the move*    *where you are watched*

## *Why protect yourself?*

Do you know where and when you are being watched? Surveillance cameras are emerging everywhere. Employees spy on staff not only to reduce substance abuse and protect property, but also to increase production and profits. Shopping centres watch customers not only to reduce theft, but to watch customers movements to stimulate sales and increase profits. Cameras have appeared on streets watching pedestrians and cars not only to manage traffic flows and reduce vandalism, but also watching people going about their daily business.

There are few laws and guidelines restricting the use of cameras. Research into camera surveillance has found that camera operators spend significant time watching attractive young people, and even engage in voyeuristic practices. In some countries people have lost their jobs or been imprisoned for seemingly innocent comments or actions that were conducted in an expectation of privacy and have been taken out of context by a court.

The result has been a blurring of the boundary of the public and private areas of one's life. People can no longer expect to act anonymously when they leave their homes for any purpose. As the Canadian Privacy Commisisoner noted, the uncertainty created increases the stress on people.

The DiscovaCam Handheld returns some certainty to people by alerting them to camera surveillance, allowing people to moderate their behaviour with the expectation that they are not in a private sector. Further, unsavoury practices by some employers, shops and other people can be discovered. DiscovaCam restores a sense of privacy through certainty with the Handheld.

## *The DiscovaCam family*

DiscovaCam has a range of camera detection equipment covering every need.

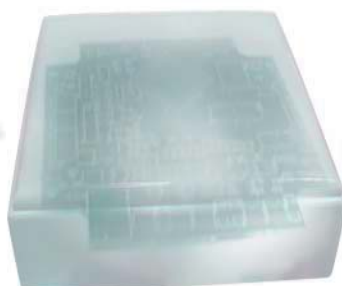

The DiscovaCam **Annunciator** protects areas where people have an expectation of privacy, such as gymnasiums, changing rooms and rest rooms. The **Annunciator** is wall mounted to deter illegal or unethical use of cameras and to alert whenever a camera is active in its area.

The DiscovaCam **Handheld** is a simple to use small unit able to detect cameras within a person's immediate proximity. The **Handheld** is ideal for checking rooms and vehicles or finding fixed cameras when you are on the move.

The DiscovaCam **Personal** is the smallest DiscovaCam and can be worn on a belt or placed in a pocket or handbag. It continuously checks for cameras in the vicinity and uses a Bluetooth cellphone to warn of camera presence. The **Personal** is ideal for continual personal protection.

The DiscovaCam **FLU** is a fixed local unit designed to protect a room, building or item from surveillance. Cameras are detected and their position is estimated. The FLU can be set up to either set off an alarm warning of a camera intrusion in a restricted area or discreetly report the intrusion to a security room. Multiple **FLUs** can be used to triangulate the camera's location in a large room or building to allow security to more easily apprehend the camera's operator. The **FLU** is the ideal protector of a place or property.

The DiscovaCam **Professional** is designed for professional security operations to use in field operations. The operator uses a computer interface to control the scanning process and can extract greater information and range than available for the standard units. The Professional is designed to enable protection of people and places, and provides security organisations the tactical options of deception and counterstrike, depriving attackers of surprise and confusing their intelligence.

## *DiscovaCam Handheld*

The DiscovaCam **Handheld** is operates independently of other equipment. The **Handheld** is styled like a cellular phone to allow inconspicuous use. The unit is similar in size to many PDAs (personal digital assistants) and incorporates a touch screen for easy operation. It is powered by standard AA batteries, allowing operation independent of power sources for up to six months of normal use.

The DiscovaCam **Handheld** can detect cameras at up to 20 metres distance. The user is alerted to the presence of cameras by a warning sound. The Handheld reports estimates distance using an onboard LCD touch screen. The **Handheld** can be connected to a computer's USB port at any time to update the unit software over the Internet or to download reporting information for further analysis.

### *Specifications*

Display:	LCD
Range:	20 metres (65 feet)
Weight	1kg (2.2 lbs)
Power:	2x removable AA battery

Computer requirements (for computer connectivity only):

- Microsoft Windows 98 Second Edition or later, or Linux v.2.6 kernel or later
- Internet connection for software upgrades

## Corporate Information

DiscovaCam Limited is a publicly unlisted company registered in New Zealand and with its head office in Silverdale, Auckland, New Zealand. DiscovaCam was founded in 2000 and provides security equipment for security organisations and the mass market.

DiscovaCam Limited focuses on bringing leading-edge technology to end-users around the world. To meet this goal, we use an Internet-based information service centred on our web site [www.discovacam.com](http://www.discovacam.com) to support our distributors throughout the world and to provide direct sales where customers prefer to trade online. Further corporate information is listed on the DiscovaCam website.

### Global Support:

DiscovaCam Limited provides global support through its web-based service at [www.discovacam.com](http://www.discovacam.com). Firmware upgrades are available from the web site.

### Warranty:

All DiscovaCam units include a one-year full replacement warranty from date of purchase.
