

PlanetCP

The online world for the common person

PlanetCP brings the concept of one world for all people into a reality.

A world based upon common interests, rather than differentiated by differences.

A world based upon rational transactions between parties, and not dictated by the interests of fashionable politics or the moralities of others.

A world where people can go about their daily business with the security of not being watched and traced by overbearing governments and corporations intent upon their own dominance.

A world without borders, where anyone anywhere can join on an equal basis.

A world which enables rather than disables.

A world designed to serve the individual person, rather than turn the person into a servant.

PlanetCP is the world for the common person.

Components

PlanetCP has a number of major components that make up this online world. A market enables the buying and selling of goods and services with a payment system everyone can rely upon. A currency is used to price goods and services, and to enable world commerce, without the complications of dealing with local currencies. A jobbing system links available people with available jobs, enabling a single global labour market. New enterprises can access resources required to bring inventions and new business ideas to the market. The whole PlanetCP system is governed through the participation of the PlanetCP population.

These components enable everyone to participate in the global economy. Everyone has the opportunity for more interesting lives with greater freedom, linked with the opportunity for superior personal circumstances.

Market

The core function of PlanetCP is an online market. It is a place for people to meet, communication, bargain, buy and sell. The market is open to everyone, regardless of their location, language, societal status or beliefs. Anybody can engage in this market.

Sellers list their goods on the PlanetCP Catalogue. Buyers review this catalogue and buy those products or services suitable for their needs.

Buyers pay for goods purchased and their money is released to the seller only when the goods are shipped. The PlanetCP system provides certainty for buyers that they will receive the goods they have bought and sellers that they will be paid. This certainty is a major improvement over traditional credit card based systems, which only guarantee payment and do not provide the buyer with any certainty of receipt of goods.

Currency

PlanetCP uses a common currency for all transactions. All goods are denominated in this currency for ease of trading between parties and to simplify payment systems.

The PlanetCP currency avoids the hassles of transferring real money. Buyers deposit money in their local currency into an account in their own country and the seller is paid in their currency. Foreign exchange restrictions are avoided and the uncertainty of prices in foreign currency is avoided.

You can use your PlanetCP currency to buy products or services, or you can hold it for future use, or convert it into your local currency. The choice is yours.

Job Management

Jobs are also available on PlanetCP. People wanting additional income can register themselves, listing their skills and costs. People with jobs to be performed can search for appropriate people and allocate tasks to these people. A person's performance on the jobbing system is recorded, so people with a good record are more likely to receive further jobs in the future.

This jobbing system enables people to perform tasks for people in far-off locations, thus enabling people to work from the place where they wish to work. People in poorer regions can find meaningful work in for people and organisations in areas where they may be denied entry.

The flexible nature of the tasks listed in the system enables people to work when they wish. People may choose to fit their work around their lifestyle choices. Other people may decide to undertake work for people in alternate timezones where there are critical deadlines. People with jobs to be performed can access previously inaccessible labour pools, enabling superior workers to be accessed for available jobs.

PlanetCP ensures that the local taxation laws are followed, so people with jobs can focus on the work to be performed and not be prevented access to the right people by administrative difficulties.

New Enterprises

People with ideas can transform those ideas into businesses. PlanetCP provides a mechanism for inventors and entrepreneurs to transform their ideas into business propositions, and links these propositions to investors around the world who are interested in supporting new concepts in the market.

PlanetCP enables a single global market for investments into new ideas and thus breaks the barriers faces by many people wishing to start a new business. The inventor and entrepreneur has a dependable method to access critical resources, while at the same time retaining a much greater share of their endeavours than the traditional equities market.

Investors, meanwhile, have access to a much wider range of investments, thanks in part to the substantially lower costs faced by new investments, enabling opportunities to emerge that would otherwise not appear on the market.

The society also benefits as a whole, as the more economic and simpler route to resources for projects accelerates innovation and creates improved conditions for everyone in society.

Protection

Each time a person accesses PlanetCP a security measure is used to verify the identity of the common person in order to protect their interests. Only an identified common person can access information that uniquely identifies that common person, ensuring privacy and protecting anonymity. In this manner, PlanetCP protects against the use of information for purposes other than its original intention.

Governance

PlanetCP is governed by rules that anyone can use, and by its members directly. The self-governance of PlanetCP ensures that PlanetCP can change to meet evolving circumstances.

In this manner, PlanetCP represents one of the very few fully democratic institutions on Earth, with all members having the right to directly contribute to all decisions, without being forced to rely on unreliable representatives.

PlanetCP's governance ensures that PlanetCP remains the planet for the common person.

Aspects

PlanetCP is enabled by new generation technology that ensures security of data and people's privacy, reliability of transactions and an economic base that transforms the prior use of information in commerce. PlanetCP has massive processing and data storage capable accessible using a web-browser and the Internet, enabling access from almost anywhere.

Secure

Security is enabled by accurate identification of each common person when they access the PlanetCP service. Accurate identification enables secure financial transactions where all parties can be confident in the other party, thus encouraging commerce.

All personal data is only accessible to the person involved, thus ensuring privacy from unwanted intrusion. The underlying technology prevents the common threat of viruses or hackers from gaining access to the data.

Reliable

PlanetCP uses an advanced database technology that replicates data across multiple linked locations in order to ensure access in case of Internet link problems and to eliminate the threat to data from any single item of equipment or location.

PlanetCP is always there.

Economical

PlanetCP is based upon a different set of economics from traditional computer systems. The service has an order of magnitude cost advantage over traditional systems, enabling services to be provided that are economically impractical through any other method. The low cost of PlanetCP services ensures that advanced information services are no longer solely for inhabitants of wealthy countries, but can provide benefits for everyone, including the poor of the world.

Ubiquitous

PlanetCP is an online service that operates from a multitude of locations. The emergence of the Internet as a pervasive common data service for the common person over the past decade provides access from practically all locations to PlanetCP. The PlanetCP service can support all languages and provide services for all people, while being scaled to be capable to support all human beings regardless of their location, ethnicity or wealth.

Consequence

PlanetCP provides the types of services that are useful today and required for the future. The online services represent the next wave of the use of information technology to enable a better life for the common person and to enable them to prosper in an increasing complex world.

PlanetCP is available now for anyone who wants flexibility in their working life, needs access to skilled people or equipment, wishes to sell products to a wider market, is interested in starting a new business or finding an exciting new investment opportunity, or simply wants a more secure life.

PlanetCP is the online world for the common person.
