

*The future has arrived*

Ever since the first computers were invented, there has been a challenge to store more and more data in computer useful ways. Now that problem is history.

systems offer new opportunities for information systems

## *The petabyte barrier is broken*

There are no restrictions on the size of XaStore databases. Where traditional relational database systems failed to go, XaStore systems prevail - to a petabyte and beyond to whatever size required. There is no technical constraint on practical database size.

Just call the data through our web page interface and XaStore does the rest.

## *Reduce the costs of computing*

Realise new economies:

- \* lower power and air conditioning costs through XaStore's more efficient technologies, while helping the planet at the same time
- \* reduce operational costs through lower administration requirements and fully automated technologies
- \* use commercial off the shelf subsystems to ensure the lowest costs of replacement parts and simplify future growth

# *Meet the challenges of the future*

- \* Archive all communications to meet legal and regulatory requirements
- \* Enable superior business intelligence systems
- \* Automate supply chain systems in ways not previously possible

## *Simplify your Information Storage Investment*

Hot Swappable System

Xastore systems provide true hot swap capability. Any drive or processor can be reconfigured without any requirement to back-up the system, reboot the system or worry about closing file structures

No more backups

Xastore's automated file technologies replicate data as it is accessed. The database indexing system enables any transaction to be reproduced, thereby ensuring data integrity without the need for time consuming and productivity destroying backup procedures

Futureproof

Expand systems as required  
No need for future expensive redevelopment in new database types

Lowest Possible Risk

All XaStore technology is standards based to eliminate the risk from your investments

*Standards Compliance*

Linux  
MYSQL  
TCP-IP  
XML  
CSS  
IDE  
ARM 9

# Corporate Information

XaStore is a member of the Development Group of associated companies.

XaStore operates from a shared set of offices in Silverdale, Auckland, New Zealand, from the home offices of our people and from cyberspace.

Visit [www.xastore.com](http://www.xastore.com)
